GREAT
JOB!

Problem Solving Framework

Nearest Smaller Element on Left

*

Given an integer array A , find the index of nearest smaller element on left $\forall i$ index in $A[]$

Formally, $\forall i$ find j such that

$$\begin{aligned} A[j] &< A[i] \\ j &< i \\ j &\text{ is maximum} \end{aligned}$$

	0	1	2	3	4	5	6	7
A =	8	2	4	9	7	5	3	10
indices of nse	-1	-1	1	2	2	2	1	6

	0	1	2	3	4	5	6	7
A	4	6	10	11	7	8	3	5
indices of nse	-1	0	1	2	1	4	-1	6

	0	1	2	3	4	5
A	4	5	2	10	8	2
value	-1	4	-1	2	2	-1
indices of nse	-1	0	-1	2	2	-1

Bruteforce

```

forall i  $\rightarrow$  0 to N-1
    nse = -1
    forall j  $\rightarrow$  i-1 to 0 LIFO
        if  $A[i] > A[j]$ 
            nse = j
            break.
    print(nse)
  
```

Tc: $O(N^2)$
 Sc: $O(1)$

Observation

0	1	2	3	4	5	6	7
8	2	4	9	7	5	3	10
↑	↑	↑	↑	↑	↑	↑	↑
-1	-1	1	2	2	2	1	6

10 : 7
3 : 6
2 : 1

$v : i$

monotonic stack

Pseudo code

```
int[] nearestSmallerOnLeft ( int[] A ) {  
    stack = []  
    ans = [0.....0] // n size  
    for ( i=0 ; i < n ; i++ ) {  
        while ( !stack.isEmpty() &&  
                A[i] <= A[stack.peek()] ) {  
            stack.pop()  
        }  
  
        if (stack.isEmpty()) {  
            ans[i] = -1  
        } else {  
            ans[i] = stack.peek()  
        }  
  
        stack.push(i)  
    }  
    return ans  
}
```

TC: $O(N)$

SC: $O(N)$

- Q> $\forall i$, find nearest smaller or equal element on left
- Q> $\forall i$, find nearest greater element on left
- Q> $\forall i$, find nearest greater or eq element on left

Q> $\forall i$, find nearest smaller element on right.

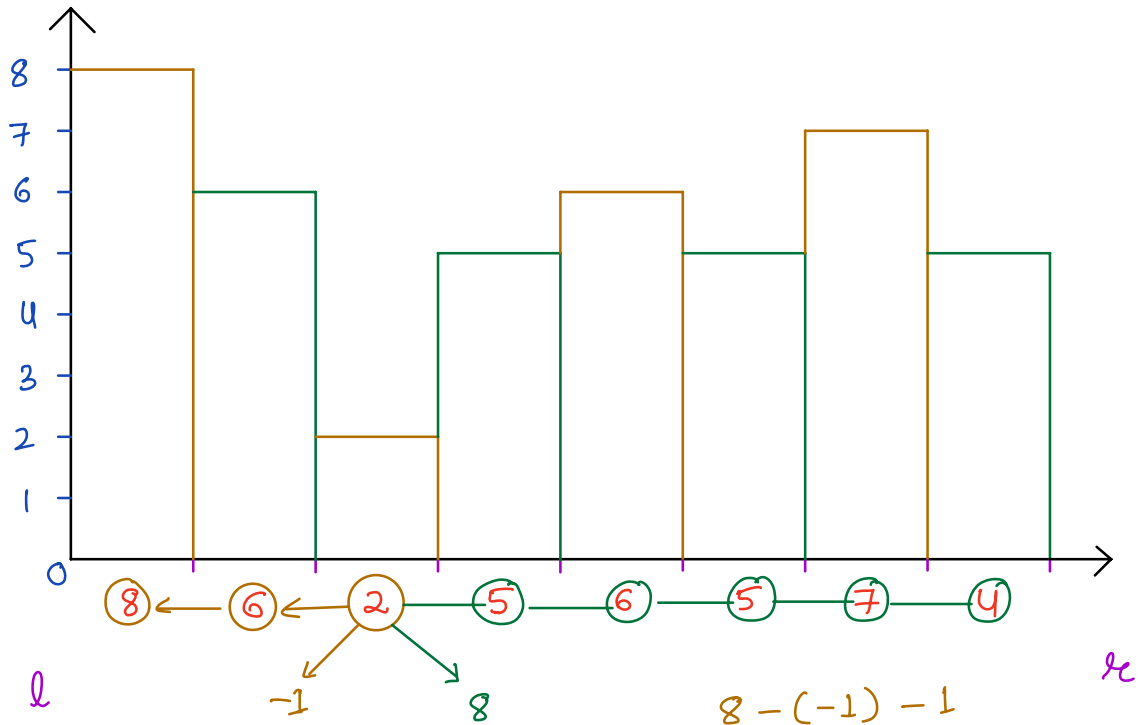

```
int[] nearestSmallerOnRight( int[] A ) {  
    stack = []  
    ans = [0.....0] // n size  
    for ( i = n-1; i >= 0; i-- ) {  
        while ( !stack.isEmpty() &&  
                A[i] <= A[stack.peek()] ) {  
            stack.pop()  
        }  
  
        if (stack.isEmpty()) {  
            ans[i] = -1  
        } else {  
            ans[i] = stack.peek()  
        }  
  
        stack.push(i)  
    }  
    return ans  
}
```

$\forall i$ nearest smaller or equal element on right $\rightarrow <$

$\forall i$ nearest greater or equal element on right $\rightarrow >$

$\forall i$ nearest greater or equal element on right $\rightarrow >=$

Q> Given $A[i]$, where $A[i]$ = height of i^{th} bar
width of each bar = 1
Find the area of largest rectangle formed by continuous bars.

Given i, j $area = \min(A_i \dots A_j) * (j - i + 1)$

\swarrow \searrow
 st end

$A = \quad 1 \quad 2 \quad 3 \quad 2 \quad 1$

$minH = 2$

$2 * 3 = 6$

$width = 3$

Bruteforce

TC: $O(N^3)$

SC: $O(1)$

$maxarea = 0$

```

for l → 0 to N-1 {
  for r → l to N-1 {
    minH = ∞
    for i → l to r {
      minH = min(minH, A[i])
    }
    maxarea = max(maxarea, minH * (r - l + 1))
  }
}
print(maxarea)
  
```

Carry Forward Technique

```
for l  $\longrightarrow$  0 to N-1 {  
    minH =  $\infty$   
    for x  $\longrightarrow$  l to N-1 {  
        minH = min(minH, A[x])  
        maxea = max(maxea, minH * (x-l+1))  
    }  
}  
print(maxea)
```

TC: $O(N^2)$

SC: $O(1)$

Break: 22:48

\forall width \longrightarrow min Height

TC: $O(N^2)$

\forall height \longrightarrow calculate width

Pseudocode

```
int largestRectangle (int[] A) {  
    nseL // calculate  
    nseR // calculate  
    maxea = 0  
    for i  $\longrightarrow$  0 to N-1 {  
        l = nseL[i]  
        r = nseR[i] // if r == -1 make r = N  
        w = r - l - 1  
        maxea = max(maxea, A[i] * w)  
    }  
    return maxea  
}
```

TC: $O(N)$

SC: $O(N)$

Q> Given a $A[]$ with **distinct integers**
 \forall subarrays, find $(\max - \min)$ &
 return its sum as the answer

$A = 2 \ 5 \ 3$

	max	min	max - min
2	2	2	0
2 5	5	2	3
2 5 3	5	2	3
5	5	5	0
5 3	5	3	2
3	3	3	0
			<hr/>
$5 * (4 - 1) + 2 * (1 - 3) + 3 * (1 - 2)$ $15 + (-4) - 3 =$			<hr/> 8 <hr/>

$A = 1 \ 2 \ 3$

	max	min	max - min
1	1	1	0
1 2	2	1	1
1 2 3	3	1	2
2	2	2	0
2 3	3	2	1
3	3	3	0
			<hr/>
			<u>4</u>

Brute force \forall subarray add $\max - \min$ to ans
 $TC: O(N^3)$

$$3 * 2 = 6$$

A = 10 2 4 5 3 20

Annotations: The element 5 is highlighted in green. The elements 2 and 4 are highlighted in orange. The elements 2, 4, and 5 are grouped with a bracket below them, with 'S' written under each. The elements 5 and 3 are grouped with a bracket above them, with 'e' written above each. A green arrow points down from the 5 in the second group to the 5 in the first group.

In how many subarrays is 5 my max element?

$$\left. \begin{array}{l} 2 \ 4 \ 5 \ 3 \\ \quad 4 \ 5 \ 3 \\ \qquad 5 \ 3 \\ 2 \ 4 \ 5 \\ \quad 4 \ 5 \\ \qquad 5 \end{array} \right\} \begin{array}{l} 5 \text{ is max element in } 6 \\ \text{subarrays.} \end{array}$$

Count of subarrays where 5 is max =

$$\begin{array}{l} * \quad i - \text{ngeL}[i] \quad // \text{ possibilities of start} \\ \quad \text{ngeR}[i] - i \quad // \text{ possibilities of end} \end{array}$$

	0	1	2	3	4	5
	10	2	4	5	3	20
ngeL	-1	0	0	0	3	-1
ngeR	5	2	3	5	5	-1

-1 → Replace with N
6

$$\begin{array}{l} \# \text{ start} = 3 - 0 = 3 \\ \# \text{ end} = 5 - 3 = 2 \end{array} \quad * \quad = 6$$

count of subarray where s is min =

$i - nseL[i]$ // possibilities of start
*
 $nseR[i] - i$ // possibilities of end

```
int sumMinMax ( A[] ) {  
    nseL , nseR , ngeL , ngeR // create  
    // also change -1 to N for right.  
    ans = 0  
    for i  $\longrightarrow$  0 to N-1 {  
        // max  
        maxSubs =  $(i - ngeL[i]) * (ngeR[i] - i)$   
        // min  
        minSubs =  $(i - nseL[i]) * (nseR[i] - i)$   
  
        contribution =  $A[i] * (maxSubs - minSubs)$   
        ans += contribution  
    }  
    return ans  
}
```
