Q> Given an integer array. Reverse the array

SC:  $O(1)$

0 1 2 3 4  
A = [ 1 2 3 4 5 ]  
5 4 3 2 1

Two pointers

l r  
0 1 2 3 4  
A = [ ~~1~~ ~~2~~ 3 ~~4~~ ~~5~~ ]  
5 4 3 2 1  
l >= r  
stop

Pseudocode

```
void reverse ( A[] ) {
```

```
    l = 0
```

```
    r = N - 1
```

TC:  $O(N)$

SC:  $O(1)$

```
    while ( l < r ) {
```

```
        temp = A[l]
```

```
        A[l] = A[r]
```

```
        A[r] = temp
```

```
        l++
```

```
        r--
```

```
    }
```

```
}
```

Q> Reverse the array from index  $L$  to  $R$   $L < R$

$A = \begin{matrix} & 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 \\ \begin{bmatrix} 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 \end{bmatrix} & & & & & & & \\ 1 & 2 & 7 & 6 & 5 & 4 & 3 & 8 \end{matrix}$   $L = 2$   $R = 6$

subarray — continuous part of an array  
 $L - R$

Pseudocode

```
void reverse ( A[], L, R ) {
```

```
    l = L
```

```
    r = R
```

TC:  $O(N)$

SC:  $O(1)$

```
    while ( l < r ) {
```

```
        temp = A[l]
```

```
        A[l] = A[r]
```

```
        A[r] = temp
```

```
        l++
```

```
        r--
```

```
    }
```

```
}
```

Q> Given an integer array with  $N$  elements &  $Q$  queries.

For each query  $L, R$

— Calculate the sum of all elements from index  $L$  to index  $R$

$A = [-3, 6, 2, 4, 5, 2, 8, -9, 3, 1]$

$L$	$R$	sum
4	8	9
3	7	10
1	3	12
0	4	14
7	7	-9

**Bruteforce** — Do as given in the question.

```
void querysum ( Queries [][], A[] ) {  
    for i  $\rightarrow$  0 to  $Q-1$  {  
        L = Queries[i][0]  
        R = Queries[i][1]  
  
        total = 0  
        for j  $\rightarrow$  L to R {  
            total += A[j]  
        }  
        print (total)  
    }  
}
```

TC:  $O(Q*N)$

SC:  $O(1)$

Over a period of 10 overs score of india is given

0	1	2	3	4	5	6	7	8	9	10
	2	8	14	29	31	49	65	79	88	97

How many runs were scored in 7<sup>th</sup> over

$$\text{score}[7] - \text{score}[6] =$$

$$65 - 49 = \underline{\underline{16}}$$

How many runs were scored from 6<sup>th</sup> to 10<sup>th</sup> over

$$\text{score}[10] - \text{score}[5]$$

$$97 - 31 = \underline{\underline{66}}$$

How many runs were scored in 10 over

$$\text{score}[10] - \text{score}[9] =$$

$$97 - 88 = 9$$

How many runs were scored from 3<sup>rd</sup> to 6<sup>th</sup> over

$$\text{score}[6] - \text{score}[2]$$

$$49 - 8 = \underline{\underline{41}}$$

How many runs were scored from 4<sup>th</sup> to 9<sup>th</sup> over

$$\text{score}[9] - \text{score}[3] = 88 - 14 = 74$$

## Prefix sum { cumulative sum }

$ps[i] = \text{sum of all elements from } 0 \text{ to } i$

How to calculate ?

	0	1	2	3	4
A =	2	5	-1	7	1
ps	2	7	6	13	14

	0	1	2	3	4	5
A =	10	32	6	12	20	1
ps =	10	42	48	60	80	81

## Bruteforce

```
int[] ps = new int[N]
for i → 0 to N-1 {
    total = 0
    for j → 0 to i {
        total += A[j]
    }
    ps[i] = total
}
```

$$ps[0] = A[0]$$

$$ps[1] = A[0] + A[1]$$

$$ps[2] = A[0] + A[1] + A[2]$$

$$ps[3] = A[0] + A[1] + A[2] + A[3]$$

$$ps[3] = ps[2] + A[3]$$

$$ps[i] = ps[i-1] + A[i]$$

$$\begin{array}{rcccccc} & 0 & 1 & 2 & 3 & 4 \\ A = & 2 & 5 & -1 & 7 & 1 \\ ps = & 2 & 7 & 6 & 13 & 14 \end{array}$$

### Pseudocode

```
int[] ps = new int[N]
```

```
ps[0] = A[0]
```

TC :  $O(N)$

SC :  $O(N)$

```
for i → 1 to N-1 {
    ps[i] = ps[i-1] + A[i]
}
```

$$\begin{array}{rcccccccccc} A = [ & 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 \\ & -3 & 6 & 2 & 4 & 5 & 2 & 8 & -9 & 3 & 1 ] \\ ps = & -3 & 3 & 5 & 9 & 14 & 16 & 24 & 15 & 18 & 19 \end{array}$$

L	R		Sum
4	8	$ps[8] - ps[3] = 18 - 9 = 9$	9
3	7	$ps[7] - ps[2] = 15 - 5 = 10$	10
1	3	$ps[3] - ps[0] = 9 - (-3) = 12$	12
0	4	$ps[4] = 14$	14
7	7	$ps[7] - ps[6] = 15 - 24 = -9$	-9

```
void querySum ( Queries[ ][ ], A[ ] ) {
    // create ps[N] } TC: O(N) SC: O(N)
```

```
for i → 0 to Q-1 { → TC: O(Q) SC: O(1)
```

```
    L = Queries[i][0]
```

```
    R = Queries[i][1]
```

```
    total = 0
```

```
    if (L == 0) {
```

```
        total = ps[R]
```

```
    }
```

```
    else {
```

```
        total = ps[R] - ps[L-1]
```

```
    }
```

```
    print (total)
```

```
}
```

```
}
```

Overall

TC :  $O(N+Q)$

SC :  $O(N)$

↓  $O(1)$

Use the original array  
as prefix sum.

```
for i → 1 to N-1 {
    A[i] += A[i-1]
```

Find the no. of equilibrium index

sum of all to left of index == sum of all to right of index

$A[] = \overset{0}{-3} \overset{1}{2} \overset{2}{4} \overset{3}{-1}$  count = 1

$A[] = \overset{0}{-7} \overset{1}{1} \overset{2}{5} \overset{3}{2} \overset{4}{-4} \overset{5}{3} \overset{6}{0}$

Bruteforce

count = 0

TC:  $O(N^2)$

SC:  $O(1)$

```
for i → 0 to N-1 {
    left = 0
    for j → 0 to i-1 { // sum [0, i-1]
        left += A[j]    ps[i-1]
    }
    right = 0
    for j → i+1 to N-1 { // sum [i+1, N-1]
        right += A[j]    ps[N-1] - ps[i]
    }
    if (left == right) count++
}
print(count)
```

## Optimised approach using Prefix sum

$$\begin{aligned} \text{// sum } [0, i-1] &= \text{// sum } [i+1, N-1] \\ \text{ps}[i-1] &= \text{ps}[N-1] - \text{ps}[i] \end{aligned}$$

total of entire array

### Carry forward technique

```
psminus = 0 // ps[i-1]
psi = 0 // ps[i]
total = 0 // total sum of array
```

```
for i → 0 to N-1 {
    total += A[i]
}
```

```
for i → 0 to N-1 {
    psi += A[i] → carry forward.
```

```
    // leftsum == rightsum
```

```
    if (psminus == total - psi) {
        count ++
```

```
    }
```

```
    psminus = psi
```

```
}
```

TC :  $O(N)$

SC :  $O(1)$

A[] = <sup>0</sup>-3 <sup>1</sup>2 <sup>2</sup>4 <sup>3</sup>-1

i	psminuy		total	psi	count
	0		2	0	0
0	0		2	-3	0
1	-3		2	-1	0
2	-1	= =	2	3	1
3	3		2	2	1

Break : 10:37

Q> Total # subarrays of length  $K$  ( $\leq N$ ) ?

$A = \begin{matrix} & 0 & 1 & 2 & 3 & 4 & 5 \\ [ & 3 & -2 & 4 & -1 & 2 & 6 & ] \end{matrix}$   $K=3$

Given  $A[]$ , print start and end indices of subarrays of length  $k$ .

$$N = 8$$

$$k = 3$$

0	1	2	3	4	5	6	7
1	2	3	4	5	6	7	8

Q> Given an integer array. Find max subarray sum of subarray of length = k

$A = [ 3 \quad -2 \quad 4 \quad -1 \quad 2 \quad 6 ]$        $k = 4$

Q> Given an integer array . Print the sum of all possible subarray { continuous part of array }

$A = [1 \ 2 \ 3]$
